Apr 29
EPOS ICS-TCS interaction workshop in Amsterdam, 29-30 April 2019

Monday, April 29, 2019 to Tuesday, April 30, 2019
Location:
Amsterdam, The Netherlands
The EPOS Implementation Phase IT team (WP6&7) will organise the EPOS Thematic Core Services (TCS) - Integrated Core Services (ICS) Integration Workshop the 29th and 30th April 2019, in Amsterdam (The Netherlands) at NOVOTEL AMSTERDAM CITY.

The workshop is open to the EPOS Thematic Core Services (TCS) WP leaders (WP8, 9, 10, 12, 13, 14, 15, 17, except the TCS Volcano Observations and TCS Multi-scale Laboratories teams which will meet in May) and their nominees
as representative use-case persons (User Feedback Group) present for discussions with the Integrated Core Services (ICS) team.

The TCS coordinators would obtain suitable use cases from the TCSs which would be stored in GitHub. Both TCS and ICS people could comment on the use cases to ensure understanding. In parallel, the ICS coordinators have been preparing a list of ICS components. This work is at present underway. The idea is to break down each use case into requirements and that the requirements can then be matched against the ICS components that are used to satisfy the requirement. This will result in a matrix of use case requirements against ICS components. At this and at the upcoming workshops, EPOS ICS team will check the degree of satisfaction of the requirements of the TCS communities and (a) report on success or otherwise; (b) propose improvements to existing components or the need for additional components to be fed into the ICS development plan.

The EPOS ECO Secretariat pre-booked rooms for the entire group. This event is now closed to new reservations. Due to the proximity of the event dates, please contact your desired hotel directly regarding availability.
