EPOS prototype portal

A new EPOS demonstrator has been developed. The Graphical User Interface (GUI) is being validated against use cases collected in the beginning of the EPOS-IP, where each TCS group provided several user stories. The user stories were analysed, and the new GUI reflects the basic general features requested by the TCSs. The GUI is a draft version that is not fully working, but it is properly connected and integrated to the [ICS Architecture scheme].

Currently, the user can use four different modes:

- Discovery (searching for data, persons, services, etc.).
- Workspace (saving items for later use, e.g. during the Discovery).
- Visualise (plot and analyse data).
- Process (combine items from Workspace into a workflow for customized processing/analysis).

The GUI is currently hosted at: www.ics-c.epos-eu.org/
This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 676564.
